

ROSSINI ROBERTO

Backend Developer · Seeking Internship · Imbiribeira, Recife – PE, Brazil

(81) 98992-2827 | rossiniroberto52@gmail.com | [linkedin.com/in/rossini-roberto](https://www.linkedin.com/in/rossini-roberto) | github.com/rossiniroberto52

ABOUT ME

Computer Science student (expected graduation: Dec/2028) and Backend Developer focused on system architecture, performance optimization, and automation. I build scalable solutions ranging from asynchronous APIs and relational database modeling to custom low-level engines. Beyond writing code, I aim to solve infrastructure bottlenecks and deliver resilient architectures that support the real business rules of the operation.

EDUCATION

Bachelor's Degree in Computer Science — Catholic University of Pernambuco (UNICAP)

2025 – Expected graduation: Dec/2028 | Focus on Software Engineering and Systems

TECHNICAL SKILLS

Languages: Java (primary focus), C#, C/C++, Python, SQL

Backend & Frameworks: Spring Boot, Spring Security, ASP.NET Core MVC, RESTful API

Data & Infrastructure: PostgreSQL, MySQL, Docker, Git/GitHub, n8n, Pandas

Concepts: Data Structures, OOP, Memory Management, Agile Methodologies, Troubleshooting

LANGUAGES & SOFT SKILLS

Portuguese: Native

English: Advanced

Technical Communication • Autonomous Problem-Solving • Fast Learner • Teamwork

PROFESSIONAL EXPERIENCE

EJ Unicap (Junior Enterprise) | Oct/2025 – Present

Career progression with 2 internal promotions in under a year.

Computing Manager | 2026.2 – Present

- Technically leads the computing team, working on the development of technology solutions and managing the junior enterprise's IT demands.
- Oversees technical feasibility and architecture for internal and consulting projects.

Project Analyst | 2026.1 – 2026.2

- Conducted technical requirements gathering and software architecture feasibility assessment, operating under agile rituals (Scrum/Kanban) across simultaneous projects.

Project Consultant | 2025.2 – 2026.1

- Automation & APIs: developed and maintained integrations using n8n (Notion, Trello, WhatsApp), optimizing internal operational processes and reducing manual failures by 75.8%.

SELECTED PROJECTS

Edu-Verse API (Backend) — Java, Spring Boot 3, PostgreSQL, Spring Security, JWT

- Developed a robust RESTful API using a multi-layer architecture (controller, service, repository).
- Implemented JWT security, relational modeling with JPA/Hibernate, and data validation (DTOs).

EJUNICAP Internal Platform — Python, FastAPI, PostgreSQL

- Architected a complete corporate management solution (ERP/CRM), optimized to run on a 512MB RAM / 2-core environment, using asynchronous routes (AsyncIO) and SQLAlchemy connection pooling.
- Reduced project management time (task allocation and management) and team allocation time by 75%.
